

Daavlin Home Phototherapy Benefit

Phototherapy is a safe and highly effective treatment for such skin diseases as psoriasis, eczema, and vitiligo, as well as many others. It can take place in a clinical setting or be prescribed for use in the patient's home. For best results, phototherapy treatments need to occur about three times a week for several weeks to months depending on the disease. Home phototherapy is popular because it is easy for patients to maintain consistency in their treatment schedule

Most phototherapy performed today uses Narrowband UVB. This is the most therapeutic band of light and treatments are quite brief, typically just seconds to minutes in duration! Patients simply expose the affected skin to the light - there is no need for other drugs or medications. Once the treatment is over, patients can go about their day as normal.

HOW MUCH DOES THIS COST?

- i** The program is provided to you at a substantial discount, or in some cases AT NO COST!

WHAT ARE THE RISKS?

- i** Contrary to other therapies, phototherapy can be prescribed for many types of patients. Pregnant women, children, the elderly, and those with compromised immune systems can all benefit from this safe and effective treatment. Side effects are mild and temporary. Examples are dry skin, itching, or occasional erythema.

IF YOU WISH TO PARTICPATE:

- i** Discuss this option with your physician and then contact AGA at 1-800-888-6472 to start the process!
